

## air septimanie A320 - CSL Aircraft

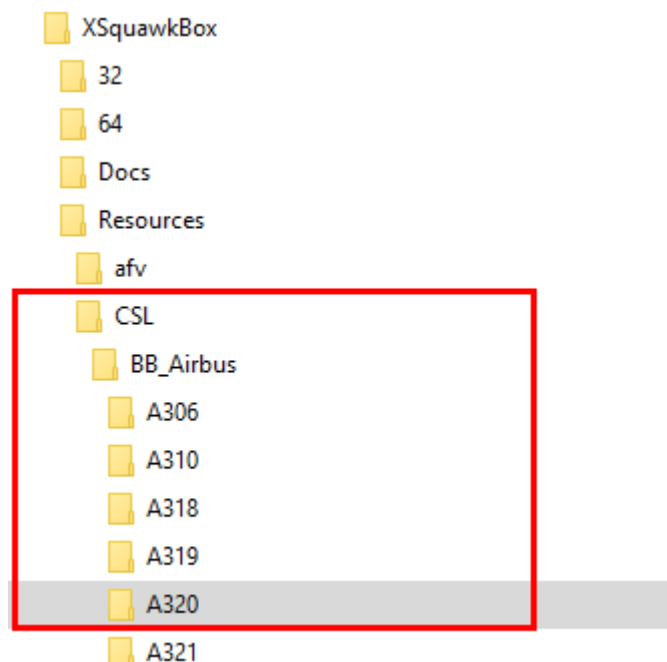

OCCITANIA  
SOI D'AQUI !

Please find (at last) the A320 of our little virtual airline air septimanie (<http://www.air-septimanie.com>) as a CSL aircraft to be used in XSquawkBox (XSB), World Traffic (WT), Pilot Edge ...

The static aircraft object is based on the **ART** livery in **Bluebell's CSL aircraft collection**, which has been brought together by **Oktolist** (<https://forums.x-plane.org/index.php?/files/file/37041-bluebell-obj8-csl-packages/&page=18&tab=comments#comment-329568>).

The livery corresponds to the livery for our **QPAC A320** (<https://forums.x-plane.org/index.php?/files/file/27528-air-septimanie-occitania-livery-for-qpac-a-320-v11v20/>) by myself and the livery for the **JarDesign A320** (<https://forums.x-plane.org/index.php?/files/file/65784-jardesign-a320-air-septimanie/>) by **royaloak**.

In order to use the livery, please unzip the **air-septimanie-csl.zip** file and add the extracted **A320\_LRF.obj** and **A320\_LRF.png** files into the A320 folder under the BB\_Airbus folder of **Bluebells CSL** package. A sample set-up for XSquawkBox is shown below.

If you haven't yet installed the **Bluebell CSL aircraft collection**, you can do this by using the URL provided above or by searching for "**Bluebell CSL**" on the **x-plane.org** web site.

In addition it is necessary to add the livery to the **xsb\_aircraft.txt** file stored under BB\_Airbus. Please add the following information to this file:

```
OBJ8_AIRCRAFT A320_LRF
OBJ8 SOLID YES __Bluebell_Airbus/A320/A320_LRF.obj
VERT_OFFSET 3.5
AIRLINE A320 LRF
```

This should hopefully ensure, that the livery is picked up correctly when flying e.g. on VATSIM.

Please note, that these objects have been released under the same license as the original items. You are free to use them and as a starting point for your own liveries, as long as you ensure to respect original work.

Thanks,  
SLF68 – Markus Meurer
